

TROMBONE GUARD

Protect the end of your trombone's delicate slide from accidental bumps and scrapes. Reduce costly instrument repairs with the **Trombone Guard** from Neotech. Its small profile allows it to remain in place when the slide is put into most instrument cases. **Trombone Guard** easily covers the bow end of most Bb to Bass trombone slides. It fits slides measuring from 3.625" - 4.375" (9,2 - 11,11 cm) in width. Guard your slide with Neotech's **Trombone Guard**.

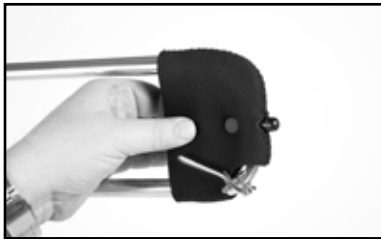

1. Turn back a short "cuff" to make it easier to apply the **Trombone Guard**.

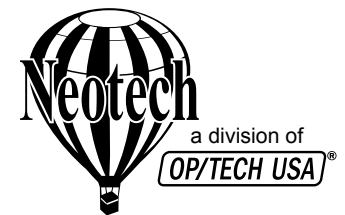

2. Locate the spit valve opening in the **Trombone Guard** and place it over the spit valve's lever.

3. Bring the main portion of the **Trombone Guard** over the end of the slide. If your slide has a ferrule (slide bumper), guide it through the hole provided.

4. To complete installation of the **Trombone Guard**, secure the two snaps.
